- Activity/ Entertainment Program with Frequent Outings

SHORT STAY SKILLED CARE

Our center meets the special needs of short stay skilled patients with physical, occupational and speech therapy, wound management, respiratory, and nutritional therapies combined with 24 hour nursing care.

PHYSICAL THERAPY

This care is driven by the resident's individual needs and involves the strengthening and reconditioning of muscles, and the improvement of coordination, endurance, and mobility. Progress is achieved through specifically designed and monitored treatment programs.

OCCUPATIONAL THERAPY

Focuses on retraining and providing support for daily living and skills such as bathing, eating, and dressing. The return of these skills helps develop a measure of independence and self-dignity for our residents.

SPEECH-LANGUAGE THERAPY

Re-teaches communication, speech, swallowing, and other functions changed by neurological impairment, illness, and injury. Audiological therapy can be just as important as speech therapy when improving a resident's communication skills.

RESPITE CARE

Our respite care program is designed to give family members a break from the demands of caring for the chronically or terminally ill at home. Whether it's for a weekend or a few weeks, we provide the resident with a comfortable and secure medical and social environment designed to give the family caregiver peace of mind.

LONG TERM CARE

The long-term resident enjoys a personalized family setting with opportunities for social interaction. We assist residents with their ever-changing needs and provide family support groups, so every member of the family can be involved in the care process.

We offer many activities and recreational programs geared to a variety of interests. During the stay the resident is able to achieve and maintain the highest possible level of function.
